

VJ54 Take-Up Reel System Installation/User Guide

The PrismJet VJ54 Take-Up Reel System keeps printed vinyl off the floor for a clean and continuous workflow.

INSTALLATION (Steps 1-10)

1] Align L-brackets onto front legs of stand.

2] Add mounts to aligned brackets and secure with 4 small screws with washers.

3] Add larger screws on inside and outside of legs. Tighten using a hex key.

4] Insert one steel bar through left (motorized) and right (non-motorized) reels.

5] Space to insert reels' plastic flanges into opposing ends of 54" cardboard core.

6] Slide assembled system through front collar of left mount and then right.

7] Adjust the steel bar for centered fitting and secure by tightening the screw.

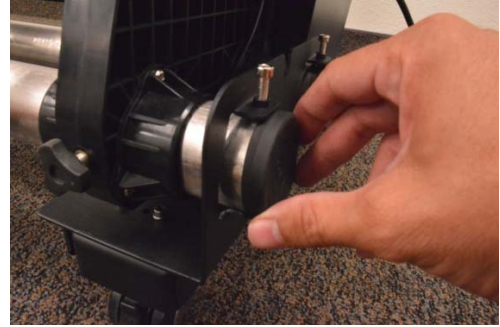

8] Add second steel bar through mount and onto reel's back half collar.

The PrismJet VJ54 Take-Up Reel System keeps printed vinyl off the floor for a clean and continuous workflow.

9] Add screws to outer mount brackets to secure both steel bars.

10] Add caps to end of steel bars.

OPERATION (Steps 11-14)

11A] Advance media and tape it to cardboard core (straight, no wrinkles), OR

11B] Print media; then pause to tape to cardboard core (saving wasted media).

12] Use provided adapter to plug power cable into electrical outlet.

(Note: The power cable DOES fit the provided adapter).

13] Use switch to power forward or backward.

14] Adjust the clutch if the reels pull too quickly (roll too tight) OR slowly (vinyl touches floor).
